

Please enter into the record my opposition to any FCC interference with XM Radio's local traffic and weather channels. This provides competition. In the NY area Shadow traffic has often proven to be lazy, inaccurate and late with information. Competition from XM is the kind of thing that will force Shadow and other traffic and weather producers to be more accurate and up to date.

If the FCC has free time on it's hands perhaps it can address such issues as why Infinity owns BOTH all news outlets in the same market and why it appears to encourage too few companies to own too many outlets.

Please do NOT curb the growth of new outlets like XM that provide a competitive atmosphere and serve the public.
